SKYPANEL

SkyPanel Remote

Inspired by the requests of users, the SkyPanel Remote adds new flexibility and ease-of-use for the popular SkyPanel line of luminaires. This handheld remote connects to any SkyPanel via a USB cable and allows for full control of the fixture remotely. This is particularly useful if the SkyPanel is high up on a light stand or in a position where the onboard control panel is difficult to access.

FW 2.5

SkyPanel Firmware 2.5

Alongside the release of the SkyPanel Remote comes a firmware update that brings new features to the SkyPanel, improves the experience of using the remote and adds various other minor enhancements. SkyPanel Firmware 2.5 introduces five key new features: master/slave mode, expanded gel library and DMX protocol, xy coordinate DMX protocol, battery low voltage warning and control panel lock.
