

VELVET Light 2x2 290w replace Space light 5000w at Service Vision Studio Barcelona

After extensive tests lighting gaffer David Rodríguez has chosen VELVET Light 2x2 panels to create a shadow less base light at Service Vision studio Barcelona for a Pantene beauty commercial.

Project requirements

- Shadow less base light on studio for beauty shots
- High quality light to get perfect skin tones
- 15 x 15 meters evenly illuminated area with three 5 meters high walls
- Adjustment of light intensity and color temperature on the fly
- Easy to install light system

THELIGHT products installed

VELVET Light 2x2

<http://www.thelight.com.es/product/velvet-light-2x2/>

A very soft and natural base light has been achieved by displaying arrays of VELVET Light 2x2 fixtures overhead separated among them 3 meters.

QUICK & EASY INSTALLATION

THELIGHT LED solution produces exactly the same amount of light and the same soft wrapping quality as the bulky Space lights 5Kw.

To evenly light the 15 x 15 meters studio including three 5 meters high walls a total of 16 VELVET Light 2x2 panels were installed on the ceiling grid.

The fixtures installation has been enormously simplified due to the low electric consumption (290 watts VELVET versus 5000 watts Space light tungsten) that required less cabling.

VELVET DMX requires no dimmer racks to remotely adjust not only light intensity but also color temperature.

The compactness of VELVET panels (125mm versus 1000mm space light) provides one more meter usable height on the studio.

DAYLIGHT ON STUDIO & FULL LIGHT CONTROL

The full DMX remote control allows on the fly color temperature and light intensity adjustments using a simple DMX console.

THELIGHT fixtures can be easily mixed with tungsten or daylight sources thanks to the variable color temperature so that getting a daylight base light on studio just needs to remotely push a button.

THELIGHT

the unique all-in-one light

The Director of Photography and commercial director were pleased by the state of the art LED light solution and the low heat on the studio.

THELIGHT solution benefits

- Easy rigging and cable installation with no dimmers required
- Colour temperature and intensity variation allow instant remote adjustments
- 17 times less electric power consumption
- 80% less air conditioning required
- The panels compactness provides 1 meter free headroom
- Tungsten & daylight to combine with any other light source
